Of the Eclipses this Year, 1696.

IN this Year there will happen but two visible Eclipses only, and they be both of the lesser Light, the Moon: There will be two also of the Sun, but invisible in our Horison. They of the Moon thus happen, *viz.*

The first of them will be on 6 day of *May*, the middle time thereof at 43 min. past 11 of the Clock at Night, it will be a visible and total Eclipse.

The second will be on *October* the 30 day, the middle time thereof at 28 min. past 4 of the Clock in the Morning. This also is a great visible and total Eclipse, and happens in the eighth Angle of the Heavens. The Moon is eclipsed exactly in her Southern Node.

From the Beginning of this Year unto the 23 day of *August*, the splendid Planet *Venus* is our bright Morning-Star; thence having made her Conjunction with the Sun, she becomes Occidental, and our Evening Star to the End of the Year, and to the 12 of *June* 1697.

First Quarter the 1 day, 41 min. past 9 in the forenoon.
Full Moon the 9 day, 34 min. past 6 in the morning.

TO Measure Timber and Board, the ordinary way now used amongst Carpenters in the Country, is by the Line of Numbers, commonly called *Gunter's Line.*

Board-Measure.

As 12 is to the breadth in Inches: so the length in Feet, to the content in Feet.

Squared Timber 14 Inches on both sides, or any other equal *Square.*

As 12 Inches is to 14 Inches the breadth or side: so the length in Feet, to a fourth Number: and that fourth Number extended to the content in Feet.

A *Square* 14 Inches one side, and 9 Inches the other side, or any unequal Squared Timber.

As 12 Inches is to 9 Inches the breadth: so the depth 14 Inches to a fourth Number.

As 12 to this fourth Number, so the length in Feet to the content in Feet.

Round Timber.

As 42, 54, (the Circumference in Inches that makes 1 Foot long, a Foot.) is to the Circumference in Inches. So the length in Feet, to a fourth Number, and that fourth, to the content in Feet being extended.

But the usual way with Carpenters is, to girt about the middle, and take a fourth part thereof for the *Square*, and then measure it as *Squared* Timber by the Line. Note, that if the Compasses come off the Line, they must be set at the same point, on the Line at the other end of the Ruler: and always keep them forward the same way, according to the Proposition.

A Table of Interest at Six per Cent.

THis Table shews the Interest of any sum of Money from 1 l. to 1000 l. from a day to a year. And by the help of Addition you may compute the Interest of any sum whatsoever. And note, that for the better exactness the Pay is divided into 100 parts, 240 to that 25 parts make a farthing, 100 parts half a penny, and 75 parts 3 farthings, &c.

Example.

The Interest of 800 l. for one month one day, is

	l.	s.	d.
for one month	20	0	0
for one day	00	0	8
	20	0	8

A TABLE

A TABLE shewing how many Years Purchase a Lease or Annuity to endure for any Term of Years under 33, is worth presently at Interest upon Interest, at Six in the hundred, and shewing plainly how to Discount any Lease in Being, and the true Value of the Reversion, after any Number of Years.

The Use and Explanation of this TABLE.

The first Column towards the left hand, shewes the Years of a Lease or Annuity, and right against each Year, is the Years, Months, and Decimal Parts of a Months Purchase, that such a Lease or Annuity is worth.

EXAMPLE.

Suppose a Lease or Annuity to continue ten Years, and you would know how many Years Purchase it is worth in present Money; look in the Table for ten Years of a Lease in the first band, and against it the same you shall find 7, 4, 3; which sheweth such a Lease to be worth seven Years, four Months, and three tenth Parts of a Months Purchase.

Years of a Lease.	Years.	Months.	Decim.
17	10	5	8
18	10	9	9
19	11	1	3
20	11	5	7
21	11	9	3

28	13	4	9
29	13	7	1
30	13	9	2
31	13	11	1
32	14	1	0

Again, Are you to take or buy the Reversion of any Lease or Annuity, work thus; Suppose the Lease to be thirty Years in all; you find in the second Table, and right hand against thirty, 13 Years 9 Months, and two tenth parts of a Month's Purchase; this it were worth, were it in present possession. But suppose there be a Lease of five Years (more or less) before yours commence; look in the Table against the five Years, and there you find four Years, two Months, five tenth parts, half a Month's Purchase; take this out of the sum against thirty, which is 13, 9, 2; 4, 2, 5; the remainder is nine Years six Months, seven tenth parts of a Month; and so much is the Reversion after five Years worth, the remainder of thirty Years. This is useful and very easie.

The Explanation and Use OF THE MAP and TABLE.

FIrst for the Map. The Figures in each Shire of the Map, are to shew you the names of every County, and the Letters in the same are for such uses as I will shew hereunder.

You must understand, that London is in Middlesex, which County of Middlesex hath the figures of 22 in it, and the little black speck or spot therein, signifieth London. Now if you would readily finde the name of any Shire therein, and how many miles the middle of the said County (in a streight line) is from London, and what point of the Compass it lieth from the said City, relort them to the Table of Shires on the other side, and it will resolve you.

As for Example:

Yorkshire it hath the figures of 39 in the Map, and so it hath likewise in the Table; where is shewed that the middle or heart of that Shire is 145 Miles from London in a streight line, and it lieth North from the City: and looking forward toward the right hand, it sheweth it hath one City, Forty Market Towns, Fourteen Castles, Four hundred fifty nine Parishes, Thirty six Rivers, and Seventy two Parks; and so of the rest.

The use of the Letters in the Map, is this:

Scotl. signifieth part of Scotland, I part of Ireland, F part of France, M the Isle of Man, W the Isle of Wight, L the Lizard-point, H Holy-head, the * the Irish-Sea, B the British or English-Sea, G the German-Sea, Be Barwick, D Dover, N Newcastle, C the Points of Compass, S the Scale of Miles by which you may measure the distance of any place: for every black degree is five miles, so is every white.

The 39 Shires from Berkshire to Yorkshire are the English Shires, and the other 12 from Angleley to Radnorshire are Welsh.

It may be something further in Miles to the middle of each Shire, by reason of the crookedness of the high-ways, Hills and Dales; but what is here set down is meant in a streight line from London.

To Measure Land by the Chain of ten Links to the Pearch.

I Understand that many honest Country-men, could Measure small Closes or pieces of Land, by casting them into Triangles or Squares, if their lengths, breadths, or perpendiculars would happen to be in even Perches, but if they have odd links in them, then they do not understand the way how to cast them up; therefore I will shew them how they shall perform the same.

Suppose there be a Close or piece of Land 35 Perches and 7 Links long, and 24 Perches and 6 Links broad, Multiply 35.7 the length, by 24.6 the breadth, as if they were whole Numbers, with a prick between the Perches and Links, and the product thereof will be 87822, which two last Figures in your product you must cut off, with a dash of your Pen, which are 22 square links towards another Perch, there being in one Perch 100 square links; the 878 in your product are Perches, and if the 878 be divided by 40, the Quotient will be 21, which are Roods, and 38 Perches, which long square land contain 5 Acres 1 Rood, 38 Perches, and 22 square Links.

Example of the Multiplication.

If your length or breadth to be multiplied, were one of them given in Perches, the other in Perches and Links, then from the product thereof, you must cut off but one Figure, which one Figure will shew, so many tenth parts of one Perch. And if the length or breadth to be multiplied happeneth to have a half Link in either of them, thou mayest remember, that half a Link in breadth, through every twenty Perches in length, maketh one Perch of Land, which thou mayest add to thy product, &c.

1 4 2 8	
7 1 4	
8 7 8 2 2	

Although there be several kinds of Triangles, I will therefore add one Example for all which is general, Half the length of the Base being Multiplied by the length of the Perpendicular, shall be equal to the Area of the Triangle.

Or half the length of the Perpendicular being multiplied by the whole Base, will be the content of the Triangle.

If a Close or piece of Land be broader at one end than at the other, add both the ends together, and take the half thereof for the breadth, which multiplied by the length, the Product sheweth the true Content.

England containeth 29568000 Acres.
Scotland containeth 4432000 Acres.
Ireland containeth 8000000 of Acres.
The 17 Provinces of the *Low Countries* contain in the whole, 10791000 Acres; whereof those under *Spain*, 97000 Acres.
Those *United* under the States, 3599000 Acres.
France in its 32 Provinces containeth 52877000 Acres.

The Explanation of the following Table.

First, get a Chain or Cord of two perches in length, and divide each perch into 10 equal parts, which I call links, each of those parts will contain 19 inches and 8 parts of one inch: the inch divided into 10 parts, 10 of those links makes 15 feet and an half, our common perch Statute-measure: 100 square links makes one perch of land, 40 square perches make one rod, 80 half an acre, 120 three rods, and 160 square perches one acre.

This following Table doth contain 5 Colums: The first Column on the left hand sheweth the length of the Acre in perches and half perches; the figure of 5 under every length, signifieth 5 links, or half a perch forward: The other four Columns shew the breadth for one Acre; the first Perches, the second Links, the third Inches, the fourth Parts of one inch, the inch divided into 10 parts.

And also in this last Column in many places of this Table, you will see a small Figure placed on the right hand of p, which is no more than one 10th part of an inch divided into 4 parts; and the true or neetest part I have observed.

Example: At 13 perches in length, the breadth will be found 12 perches, 3 links, 1 inch, and 5 parts of an inch, and 1 part of a fourth; which is a quarter of a tenth part. At 13 perches and an half in length, which is expressed by the figure of 5 under 13, you will finde the breadth 11 perches, 8 links, 10 inches, 2 parts and 3 quarters.

A Table to set forth Acres:

Declaring the breadth for one Acre for any length given in Perches, or in Half Perches, from 10 to 80.
